## Explanation of Numerical Codes

The codes presented in the following pages are designated primarily for the grouping of records in geographical divisions.

State Code - The state code consists of two digits which are shown to the right of the state name. The left hand digit indicates the geographical division in which the state is located. The right hand digit indicates the location of the state within the geographical division.

County Code - The county code consists of three digits which are shown to the left of the county name. The counties have been numbered in alphabetical order so that when cards or other data for one state are arranged numerically by county number, the decoding of these numbers will give the names of the counties in alphabetical order.

Location Code - The counties are assigned numbers according to their geographical location within the state. Starting with the northwest corner of each state, the counties are coded, 1, 2, 3 etc., from left to right across the northern tier of counties and continuing in like manner for each successive tier of counties. See sample below. Small numbers represent county location codes.

District Code - The district code designates the crop reporting district within which each county lies. Generally district 1 occupies the northwestern part of the state, district 2 the north central, district 3 the northeastern, district 4 the west central part, etc. However in states with irregular boundaries, this arrangement may not be followed, also more districts may be added or omitted. See sample below. Large numbers represent crop reporting districts.
